SUBMISSION HIGHLIGHTS: PAPER III

Manuscript Title: Evaluating Vacuum Vessel Structural Reserves Under Asymmetric Halo Currents Using 3D Anisotropic Tsai-Wu Failure Envelopes

Author: Jacob James Rasmussen (ORCID: 0009-0009-7084-6523)

Target Journal: Fusion Engineering and Design

Core Highlights (Max 85 characters per bullet):

- 3D anisotropic Tsai-Wu yield metric f_TW = 0.244 <= 1.0 under disruption loads.
- Rotating n = 1 halo currents (1.8 MA, 120 Hz) produce peak DAF = 1.85.
- Inconel 718 keyway interlocks achieve Strength Reserve Ratio SRR = 1.61.
